the Movies, Dordrecht 2013, the Netherlands

Cor-ten steel, LED lights

Client: city government Dordrecht

I created three artworks on the exterior of the movie theater "the Movies" in Dordrecht. The artworks were realized in cooperation with the architects of the movie theater, Abramse en Kock Architects

The artworks relate to the surrounding environment of the theater. I used the surrounding buildings as a starting point to create these sculptures. These buildings create an illusion as used as sections used in theater stage design. These sections are translated into layers of the sculptures made of weathering steel. Each present one basic shape: circle, rectangle and triangle. I incorporated LED lights in the sculptures. The LED lights are programmed and appear in different parents, they represent the world of cinema.
